Disassembling Macintosh IIsi System Fan

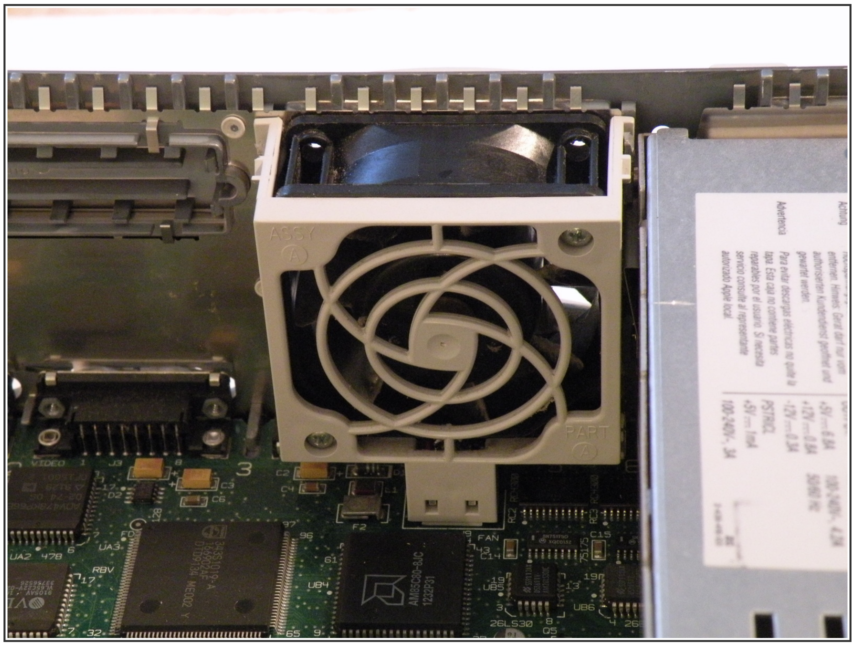

Written By: Chris Green

INTRODUCTION

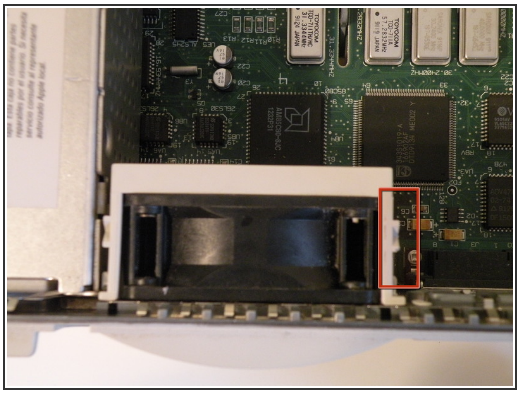

The Macintosh IIsi has a case fan mouted on inside back of the computer case.

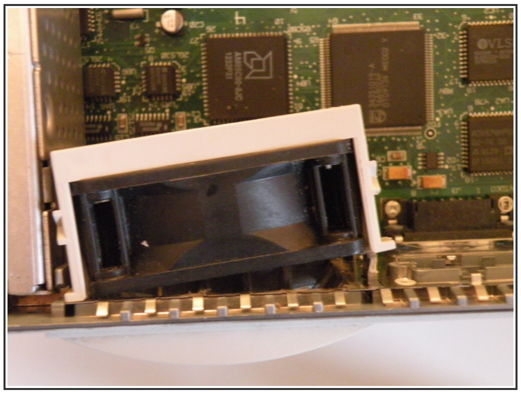

Step 1 — System Fan

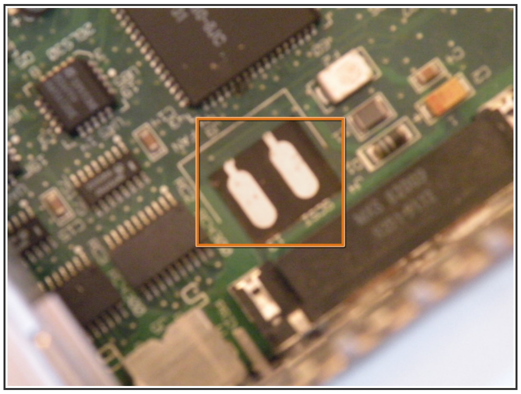

- The fan recieves power from two contacts on the logic board and has no connector.

Step 2

- In all of the years that I have worked on this machine, I have found no good way to remove the fan.
- The best way to start, is to push in here on the side of the fan.
- Being careful not to exert too much force, try to push in, and wiggle the fan outward as such. (2nd Photo)
- You can now lift the fan all the way out, and remove it.
- The Fan Power Contacts on the Logic Board:

To reassemble your device, follow these instructions in reverse order.
